

Minimap and world map

Basic usage

Press M to open the map. Right click to get a menu that lets you teleport or create waypoints.

Moving the minimap

By default your minimap might overlap your pokemon roster, you can move it to the top right

Press esc, go to mods

Click Z-A to sort (idk why but the search doesn't really work)

Click config for Xaero's minimap

Fixing teleport

If teleport doesn't work:

Fixing teleporting to arbitrary points on the map

Open the map (M) and click the gear on the top left

Fixing teleporting to waypoints

Go to the 'waypoint screen' (press U) and click options

go into Teleport Command

Click "use default" to switch it off and then delete the "@"s" from both commands (should look like this)
