

Overview

We're running a Minecraft NeoForge 1.21.1 server in creative / peaceful mode, so there are no enemy mobs.

The server has a lot of mods installed. Here are some of them

- [Cobblemon](#), which adds Pokémon and *accurate battles* to the world, as well as probably every item in existence.
 - [Cobblemon: Legendary Monuments](#), adds a bunch of structures to world gen and ways to obtain legendary/mythical pokemon
 - other Cobblemon enhancement mods
- [Create](#), adds a bunch of mechanisms and stuff, very Steampunk aesthetics
 - [Create Aeronautics](#), lets you build physics contraptions such as airships and cars
 - [Create: Power Grid](#), simulates electricity based on the real laws of physics
 - [Create: Train Track Rail Grinding](#), lets you grind on train tracks (Sonic style)
- [Distant Horizons](#), lets you look at really far away chunks, very impressive
- [Sodium](#) + [Iris](#), lets you use *shader packs* to make it pretty
- [CC: Tweaked](#), puts computers in your minecraft so you can computer while you computer (they run the Lua programming language, have floppy disks and stuff)
- [Effortless Building](#), simplifies building basic shapes like walls, columns, spheres, cubes, and more through a radial menu accessed by pressing left-alt. Has undo and redo support, and also can place blocks in an array, mirror placed blocks, or randomize placed blocks according to a block palette you've configured. See the mod listing for more information!
- [Xaero's World Map](#) and [Xaero's Minimap](#), which are maps and support easy teleporting around the world and creating your own waypoints and points of interest, plus easy location sharing with other players

Continue to [Getting Started](#)

(Screenshot taken with Solas Shader v3.7b, not enabled by default in case your computer can't handle it)
