

Slash Commands

Slash Commands can manipulate the game state, change your position in the world, modify your inventory, and more; also known as console commands in other games.

Some useful slash commands to know. Hit **T** to bring up the chat window and begin typing. Tab will autocomplete suggested commands. You can read more about them [here](#), but most of these aren't relevant to us.

Some commands may require admin to use, we're gonna see what we can do about that.

/gamemode survival	switch to survival mode
/gamemode creative	switch to creative mode
/time set day noon night midnight	set global game time - also accepts numbers like 6 for 6am, 15 for 3pm
/weather clear rain thunder	set global weather (rain makes snow in cold biomes)
/spawnpokemon <pokemon> [attributes]	example - /spawnpokemon shiny abra ability=synchronize
/tp @playername /teleport @playername	teleport to named player instantly
/locate structure <structure>	get the coordinates for the nearest instance of a structure
/locate biome <biome>	get the coordinates of the nearest biome within 32x64 blocks (ex: minecraft:plains)
/locate poi <poi>	get the coordinates of the nearest point of interest within 256 blocks
/seed	displays the world seed, useful for webapps that can display MC maps like this one (this is the same one we're playing with)

Revision #1
